---

There will be a strong IEEA contingent at European Space Weather Week 11 next week in Liege, with Pierrick Hamel and Joe Kinrade both travelling to Belgium to present their latest work. Hamel will present a scintillation mapping method using a Kriging algorithm (Session 7, Wednesday 19th November, and splinter session "Working with the SSA-SWE Data Centre - Status and Upcoming Developments"). Kinrade, in his research role within the Marie Curie TRANSMIT training support project, will deliver a review of the current status of GNSS ionospheric tomography in Antarctica (Session 2, Tuesday 18th November).
